ENTERPRISE
MOLDED
PRODUCTS

HIGH PERFORMANCE THERMOPLASTICS

THIXOMOLDED MAGNESIUM

THERMOSETS

PRODUCTION CAPABILITIES

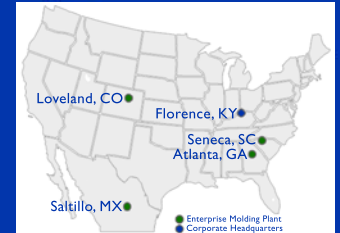

Parkway Products has been providing cutting-edge molded parts solutions to the world's largest transportation OEMs since 1946. Today, Parkway's transportation development team is committed to providing transportation customers a stable source of supply for a broad range of molding technologies as well as low cost assembly options.

**Custom Plastic Injection Molding - Compression Molding
 Magnesium Injection Molding - Insert Molding
 Overmolding - Part Decoration - Ultrasonic Welding
 Assembly & Kitting**

FACILITIES

Parkway's geographic footprint offers a logistic advantage to the transportation customer. With facilities located throughout the United States and Mexico, deliveries can be made efficiently to most North American sites. All facilities are modern, well-lit and flexible to accommodate any capacity or tonnage requirements.

MATERIALS

Thermoplastics: Torlon® PAI, PEEK®, PSU, PEI, PPA, PPS, PBT, PA, PPO, PC & PC Blends
 POM, ABS & ABS Blends, PP, PS, PE, TPE

Thermosets: BMC, SMC, Granular, Epoxy, Polyester, Urea, Phenolic, Vinyl Ester

Magnesium: AZ91D, AM50A

APPLICATIONS

Parkway's range of molding technologies translates into a broad range of applications, both aesthetic and functional. The development of many high performance powertrain components have originated from Parkway's Atlanta, GA, facility, while a host of interior, chassis, underhood and fuel system parts have been produced in a range of thermoplastics and thixomolded magnesium. The production of thermoset components in Saltillo, Mexico, combines a lower cost option to traditionally labor-intensive parts with Parkway's existing quality-driven production.

**Safety Systems - Fuel Systems - Underhood
 Exterior - Interior - Chassis
 Engine & Powertrain - Electronics**
